

Evolution Playback™

Review Pipeline Events As They Unfold In Instant Replay!

Replay historical data for any time frame to review events with operators, run a training scenario, tune a leak detection model, troubleshoot pipeline problems, or fine-tune operations for higher performance and profit with Evolution Playback™. It's as easy to use as an ordinary tape player.

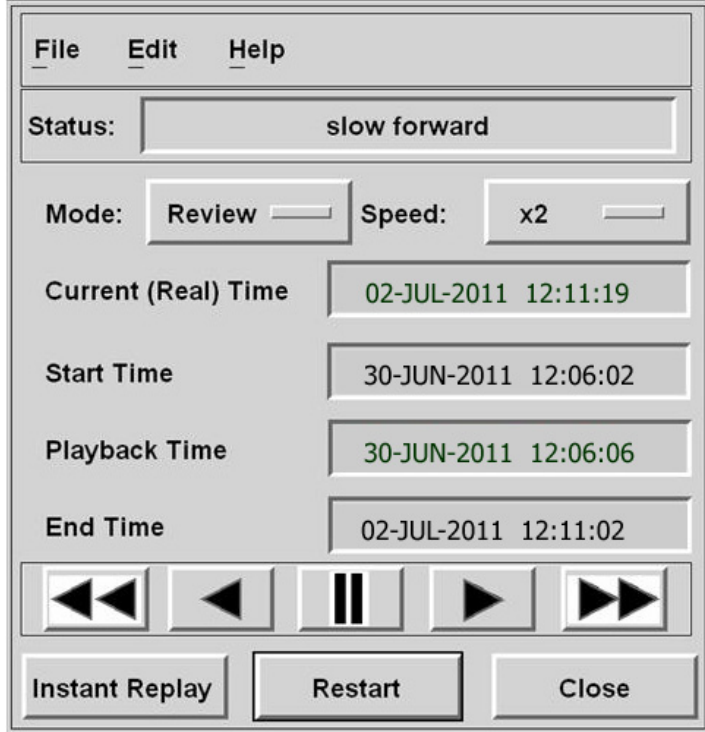

With the click of a button, you can replay past events at any speed (from 1/5th to 5 times normal rate), and pause, backup, or fast-forward to scrutinize them in more detail.

You can play back all data captured for a specified timeframe or data for select applications only.

Data is displayed on the same screens you view in the real-time system. There is no impact on the online system.

Make More Money.

"We use Playback to review the effects of different amounts of drag reducer in order to optimize throughput and reduce cost per

barrel. You can make money with it. You can fine tune operations to get the best bang for the buck."

Find Leaks Faster.

"It used to take two to three hours to pull up and review all the logs we needed for a leak detection study. With Playback we can access everything we need in 30 seconds and view it in real time."

Fly Through Reviews.

"We use Playback for D.O.T. reviews. They take one look, get the whole picture, and they're done with you. No questions asked. It's much easier."

See It Live!
